Summary of Qualifications

- Proven Technical and Business Management Leadership in Hiring, providing technical insights to business solution, implementing it and Managing stake holders.
- **Software craftsmanship of writing clean code is the primary objective in my professional carrier.**
- Strong background with **Microsoft suite of technologies** helped me to deliver state of art applications.
- Expert in implementing **Domain driven design** with Entity Framework and Microsoft SQL server.
- Expert in **Designing, developing and supporting Desktop and Thin client-based** applications using **ASP. Net, HTML, Angular, Ionic, React, Java script libraries and Blazor**, XML, ASP. Net, IIS, WPF, XAML, WinForms **in All flavors of .NET core and Framework**
- Strong experience in managing and providing solution across different **spectrum of devices**
- Expert in providing **technical solution using cloud tools**
- Expert in implementing and providing **Highly scalable solution with AWS and Azure as SaaS, IaaS, PaaS**
- Expert in **Service Oriented Architecture using Web Service and Micro service** using cloud infrastructure
- Strong database designing skills using **SQL Server 2012/2008/2005/ 2000, Oracle 8i/9i/11g**
- Expert in implementing **ORM with Entity Framework by Schema, Module and Code first** approach
- Expert in OOP skills and expertise in **OOAD using UML and Design Patterns**

Education

PGP – AI&ML, Artificial Intelligence, Texas McCombs School of Business, Austin, USA 2025 ([Verified](#))

Masters in information technology, Kuvempu University, India 2007

Bachelor of Science, University of Bangalore, India 1998

Certification

AWS Certified Solutions Architect – Professional, Expires - December 2027 ([Verified](#))

TOGAF Certified Enterprise Architect, April 2018([Verified](#))

Technical Skills

Operating Systems	All Windows Flavors, Mac
Frameworks/.NET Technologies	All flavors of .NET including Core and Framework, NUNIT, LINQ and AJAX Library, SharePoint Services, WPF, Expression Blend and WCF, Azure Services.
Languages	C#, Java, PL/SQL, T-SQL, Kotlin 1.6, Swift 5.6
Cloud and SaaS Platform	Microsoft Azure, Amazon Web Services
Web/Client-side Technologies	Angular, Ionic, React , AngularJS, Blazor NodeJS, jQuery, AJAX, ASP. Net, HTML, DHTML, CSS, XML, XSLT, XPath, XML Schema, DOM, XQuery, SOAP, WSDL.
Middleware Technologies	ASP. Net Web Services, COM/DCOM.
Scripting Languages	JavaScript, VB Script.
Databases	Oracle8i/9i/10g/11g, MS-Access, MySQL, SQL Server 2000/2005/2008/2012, Azure SQL Server 2016, Postgres SQL, MongoDB, DynamoDB
IDE	MS Visual Studio. All Flavors, Visual Studio Code, IntelliJ, Android Studio,

	XCode
Web Servers	IIS 5.0/6.0/7.0/7.5/8.0/8.5/10
Case Tools	Rational Rose (UML), Visio, draw.io
Web Page Editors	Visual Studio.NET, Visual Interdev, MS FrontPage, Adobe Photoshop.
Reporting Tools	Crystal Reports 9/10, SSRS 2005.
ETL	DTS, SSIS.
Versioning Tools	Azure GIT, TFS, GIT Repository, Bit Bucket.

Personal Work

Kitchen Sink

As part personal adventure on learning new things and for my fun activity, I always keep updating my personal repo. I started dwelling more on AI and feel free to check out my repos [GIT](#).

Professional Experience

RapidIT, Houston TX

April 22 – Till Date

Solution Architect

Clients: Sixflags Entertainment /HCL

Projects: Sixflags Digital Revamp

As part of the merging process Sixflags Entertainment is undergoing a digital transformation to improve and enhance the user experience for park visitors. Wait time reduction for in-park entertainment reduced for park visitor by providing real time data, so park user can take advantage for food ordering, rides info. Just-in-Time architecture pattern used to migrated legacy users from on-prem to cloud.

Tech. Lead

Clients: United Airlines /Apex Systems

Projects: UIA

United Intelligent Airport is a Technology agnostic cluster of Microservices providing real time analytics from different telematic device vendors installed on United Assets for Flight service, real time Assets health, Turn readiness and Catering requirements. UIA is a full-fledged cloud-based solution IMTD architecture serving needs for upstream and downstream dependencies. UIA utilized full capability of AWS IaaS,PaaS,SaaS

Responsibilities

- Design and develop **Micro services using on-prem data stores and AWS** to cater to the needs for multiple clients through backend API services
- Managing legacy thick Monolithic client
- **Part of leadership team to prepare team for Epic, Design and review system architecture** and client engagement
- Responsible for **CICD, Quality code, Code Review, Functional and Technical changes** Department's Digital Revamps
- **Design and Implemented DR strategy**
- Analyze root cause issues in the pipeline through unit test, AWS cloud watch
- Analyze root cause issues in the pipeline through unit test, AWS cloud watch, logging implemented at on-prem data base
- **Architected, designed and implemented JIT migration** for legacy guest user to new platform
- Migration of shared assembly from thick client to thin client by re-writing from .NET framework to .NET Standard library to share across multiple .NET apps including .NET core and utilized VS .NET portability analyzer
- Responsible for technical insight, deep dive in solutioning production related, performance related and standardizing enterprise system
- Responsible for **technical leadership on managing offshore team.**

Environment: Net 8, Python, Angular, React, Visual Studio Code, IntelliJ, VS 2019, AWS, NUNIT Test framework, VST, GIT, TeamCity, Octopus

SportBits, Bangalore, India

Aug 17 – Mar 22

Sr. Technical Architect

myAudioBits, GRS ET

myAudioBits provides end to end solution for Audio Books. I worked as consultant for HPE GRS team

Responsibilities

- Design and developed complete suite of Microservices, CICD using Azure SAAS, PAAS, IAAS
- Design and developed content delivery using mechanism using Azure Blob storage for all need of storing and delivering content to edge location
- Utilized logging mechanism by using Insights for trouble shooting
- Developing business prospects by studying **economic trends and revenue opportunities.**
- Plan and design the structure of technology systems, discuss these with the client
- Analyzing organization operations and helping team to understand current **market trends and gap created by existing competitors**
- Analyze the needs of **large systems and breaking them down into smaller manageable parts**
- Identifying opportunities for improvement, cost reduction, and systems enhancement and accumulating capital to fund expansion.
- **Decomposed existing monolithic application and architected, designed and implemented Micro service and Micro frontend for UI.**
- POC on developing Azure cloud migration methodology and successfully executed with client
- **Microservice API developed using ASP.NET and C#**
- **Micro frontend UI using Angular, IONIC**
- **Native Mobile application designed and developed using Kotlin for Android and Swift for IOS**
- **Architected, Developed and Implemented end to end solution for myAudioBits, result of which myAudioBits can host, provide access to its content system in IOS, Android and also through Web browser**

Environment: Net 5, Core 3.0, WPF, Kotlin 1.6, Swift 5.6, Ionic, Angular, React, Visual Studio Code, VS 2019, .NET 5 and Core 3.0, Microsoft Azure, Azure SQL Server 2016, MongoDB, NUNIT Test framework, Azure Git, GIT

ChaiOne, Houston, TX

Nov 16 – July 17

Technical Lead

The Tribe:

The Tribe is Apache Industrial Services Talent Management Portal, allowing employees and candidates to stay connected to Hiring Office Teams, Field Operational Leaders and Executive. Employees can view real-time hours worked at a location on job site and receive communication from Managers also view performance review and overall Apache Performance Score.

Responsibilities:

- Lead offshore team for planning, technical implementation as part of sprint deliverable
- Lead the conversion of Raven DB to Azure SQL implementation
- Extensively involved in Architectural design and implementation of Entity Framework on Code first basis implementation using ASP.NET with C#
- Extensively involved in architecting and designing UI framework for migrating from Blazor UI to Angular UI for rendering material view for multiple devices
- Part of leadership group to implement security feature for The Tribe Web API's
- Part of leadership group to coordinate issue mitigation for Front End, Android and IOS teams
- Extensively involved in adopting Autofac for Dependency Injection of modules into container.
- Code quality and Craftsmanship were achieved through BDD, TDD and DDD
- Part of leadership group to automate build deliverable process

Environment: Net4.6, VS 2017, .NET, MVC, Blazor.Net, Microsoft Azure, Azure SQLServer2016, NUNIT Test framework, Git, Confluence, Jira, Bit Bucket

IntraEdge

Lead Developer

Clients - Blackboard Inc., Phoenix, AZ

Oct 15 – May 16

Project - Blackboard Attendance

Blackboard Attendance is an application accessible on any tablet, phone, or computer that works in tandem with the Blackboard Mobile Reader and campus card/credential in tracking, monitoring, and keeping attendance records.

Responsibilities:

- Designed POC to help and understand storage issue and asynchronous nature of Service Bus Queue using ASP.NET with C# to boost the performance of Blackboard Attendance
- Implemented Azure Service Bus Queue worker role as full blown module using ASP.NET with C# to handle incoming Attendance data from mobile device
- Developed an AngularJS workflow manager leveraging Angular-UI's state router for flexible configuration and management of multi-step user input flows
- Extensively involved in Architectural design and implementation of Entity Framework on Code first basis implementation
- Extensively involved in adopting Autofac for Dependency Injection of modules into container.
- **Code quality and Craftsmanship** were achieved through BDD, TDD and DDD

Environment: Net4.6, VS 2015, .NET, Azure services, jQuery, Angular.js, GIT repository, XML, SQLServer2014, MS Unit Test framework.

ABB, Houston, TX

Jan 13 – Sept 15

Senior Software Developer

Process Safety Management (PSM):

Process Safety Management provides visibility to operational risk and integrity of facility. It highlights deviation in Process Safety and prioritizes corrective actions. It obtains Visibility into degraded safety. PSM is designed to reduce Safety, Environment and Financial impact. PSM provides in-depth knowledge of Risk Matrix analysis with LSRB, Procedures and Asset health indicators.

Responsibilities:

- Designed and Implemented PSM using **ASP. Net MVC with, C# and .NET framework 4.5**
- Wrote views with combination of **jQuery and (x) HTML** along with custom HTML helpers to build a bleeding-edge, **AJAX-driven user interface using Blazor UI**
- Developed Various Action Results for each entity in different controllers.
- Actively involved in Rendering of the Views with the data coming from the model. Views are bounded and implemented using in model-view-controller pattern.
- Extensively worked on **DDD and TDD pattern** on Business layer
- Involved in UAC with Product owners and Architect to help mitigate deliverables for iterations throughout **Agile process** with grooming and pre-grooming session
- **Code quality and Craftsmanship** were achieved through BDD, TDD and DDD
- Involved in **CI for Auto deployment** to different server
- Designed and Architected **Automation strategy**
- Extensively involved in **spike to provide deliverable estimation** to support importing data from Historian to PSM

Note: Lead the team of 5 developers and 3 testers for a weeklong celebration of Hackathon'15 for innovative ideas to be presented to upper management.

Environment: ASP.Net4.5 with MVC 4, Blazor.Net, VS 2013, .NET, LINQ, TFS, XML, SQLServer2012, MS Unit Test framework, Spec Flow.

Ranstad Technologies

June 10 – Jan 13

Lead Developer

Clients - Halliburton, Schlumberger, Houston, TX

Projects - Knoesis, Petrel Studio

Responsibilities

- Involved in UAC with PATT to help mitigate deliverables for iterations throughout **Agile process**
- Part of Architecture team to provide **Shell implementation** for Knoesis to modularize Knoesis family of applications
- Provided basis to **Independent yet cooperating modules**
- Separated concerns for **module building** from shell development
- Provided configuration for **Dependency injection** and Module initialization
- Primary source for **incorporating different modules** into Knoesis family
- Designed **custom control Data Templates, Control Templates, UI data structure** design module with **MVVM** framework
- Created **Dependency Properties** and Implemented **Styles Triggers, Routed events** in C#, **XAML** using **VS. Net 2010**
- Designed and developed various **converters to enhance and smooth operation for UI** and providing **multi binding capability** for controls
- Defined implicit styles, **themes, customized and applied Triggers to enhance UI skin** to suit Knoesis standard and interacted closely with UX team to accomplish this.
- Developed and Implemented license validation for Knoesis and scenarios associated with workflow
- Utilized ANT memory profiler to profile memory leak and provide valuable suggestion to mitigate memory leak associated with N-Hibernate assemblies and extensively used different tools to debug UI

Environment: .Net4.0, VS 2010, WPF, XAML, WCF, C#.Net, LINQ, TFS, XML, SQL Server 2010, NUNIT.

Camelot Integrated Solutions

June 09 – Jun 10

Lead Developer

Clients - Microsoft, Redmond, WA

Projects - MSRA (Report Analysis):

MSRA is a Report Analysis add-in for Excel app. MSRA uses BI to generate reports to cater various business needs.

Responsibilities:

- Involved in design, development and implementation of the Middle-tier for the existing 2-tier architecture of the MSRA application.
- Designed **Singleton Asynchronous WCF service** and hosted it as Window service
- Designed **POC to help understand and estimate the effort required** to build n-tier architecture from the present 2-tier architecture model
- Disintegrated the business logic from 2-tier to expose the functionality to other business groups to incorporate MSRA functionality into their application
- Designed, developed and modified Store Procedure to incorporate new enhancement, and completely eliminated dependency on SQL CLR and incorporated CLR changes into WCF service layer
- Adopted Asynchronous pattern to improvise the client interaction and speed up boot process of the application and Entity framework to improvise DAL

Environment: Net3.5, VSTO 2008, WPF, XAML, WCF, .NET, LINQ, TFS, XML, SQLServer2008, NUNIT.

SURYA SYSTEMS, FEASTERVILLE-TREVOSE, PA

BANK OF AMERICA-CALIPER

SEPT 2008–JUN 2009

AFFILIATED COMPUTER SERVICES, BANGALORE, KA

ACS EDUCATION SERVICES

MAY 2006 – JUN 2008

FIRST AMERICAN CORPORATION, BANGALORE, KA

DATA TRACE 2.X

FEB 2005–MAY 2006

VEDHA AUTOMATIONS, BANGALORE, KA

SHOPPER 6.0

CONSOLIDATED FROM DEC 2001 – JUN 2009

Responsibilities:

- Developed Multiple Presentation Layers with several user controls using WPF, WPF Controls, Net4.0, VS. Net2008 C#, XML and XAML
- Created Dependency Properties and Implemented Styles Triggers, Routed events in C#, XAML using VS. Net 2010
- Designed and developed various converters to enhance and smooth operation for UI and providing multi binding capability for controls
- Defined implicit styles, themes, customized and applied Triggers to enhanced UI skin to suit Knoesis standard and interacted closely with UX team to accomplish this.
- Utilized ANT memory profiler to profile memory leak and provide valuable suggestion to mitigate memory leak associated with N-Hibernate assemblies and extensively used different tools to debug-UI
- Utilized Lucene. Net a 3rd party API to effectively Index and search the data in the Petrel projects and defined the Asynchronous data virtualization mechanism for lazy initialization for the data object to load in to search window
- Developed the PDF functionality like Zoom-in, Zoom-Out, Marquee-Zoom, Pan-Up/Down and rotation in the presentation layer and implemented inter-operability between Unmanaged PDF components and Managed WPF Application using Windows Host

Environment: Net4.0, VS 2010/2008, WPF, XAML, WCF, .NET, LINQ, TFS, XML, SQL Server 2010/2008, NUNIT.

Leadership

- As Sr. Technical Architect assembled team and realized dream of providing Audiobooks in Indian languages and engaging stake holders to produce and publish in myAudioBits content
- Mastermind between active Marketing strategy and Media coverage for myAudioBits
- Enterprise Architecture to overview and assess current and future trend in ongoing systems and across domains to enhance capability
- Managed Off-Shore and On-Site teams for their technical deliverable and provided technical guidance
